Professional Summary

Frontend developer with 3 years of professional React experience and 5 years in IT. Sole frontend developer for a legal-services platform spanning production Intake workflows and Case Management in trial use. Built configurable form builders, real-time conflict-check interfaces, multilingual PDF exports, and accessible user journeys. Additional full-stack experience with PostgreSQL, Express, React, Node.js, and Amazon S3.

Technical Skills

Frontend: React, JavaScript, Redux Toolkit, HTML, CSS, Tailwind CSS, Material UI, React Router, Formik, Yup

Integration and tooling: REST APIs, WebSocket/Socket.IO, jsPDF, Vite, GitHub, Jira, SonarQube

Additional experience: TypeScript (project experience); PostgreSQL, Express, Node.js, Amazon S3; Claude and Codex for AI-assisted development

Professional Experience

Orbio Solutions Pvt Ltd | Software Developer

September 2023 - Present | Bengaluru, India

Own frontend implementation for a multi-module legal-services platform, translating evolving requirements and existing designs into working React interfaces. Intake serves production users; Case Management is used by trial users and is under active QA testing.

Intake and form automation

- Built drag-and-drop form and section builders with reusable fields, configurable layouts, repeatable object groups, protected mandatory fields, and draft/publish controls.
- Implemented a type-aware condition builder with AND/OR groups nested up to 3 levels, plus frontend evaluation for field and section visibility, required validation, and approval prerequisites.
- Developed conflict-check interfaces that trigger backend searches, display streamed WebSocket results with progress feedback, and highlight matching characters. Added saved-result retrieval, rerun controls, and PDF export preserving highlights.
- Implemented multilingual forms and translation-review screens using backend translations and frontend language JSON files. Generated PDFs across 16 languages with jsPDF and custom TTF fonts for non-Latin text.
- Built reviewer and approver workflows with permission-based actions, submission editing, audit logs, contact linking, internal fields, comments, and frontend financial-eligibility calculations using backend-provided formulas.

Case Management and shared platform features

- Built template-based Contact and Case configuration screens, practice-area builders, and dynamic record forms. Developed controls for custom permissions and case-access scopes by assignee, team, client, or selected cases.
- Implemented a document browser backed by storage-provider APIs, supporting uploads, nested folders, navigation, rename, delete, download, and move actions. Added record notes, time entries, and customizable dashboard tiles.
- Created reporting charts with date filters and a configurable submission-export builder with nested filters, selectable columns, preview tables, and PDF, CSV, and XLSX downloads.
- Delivered the initial organization and user-management frontend within a one-month deadline, including subscription tiers, license assignment, access roles, and billing-history views.
- Developed both account and main applications; split the original frontend to support US and Canada deployments with backend-directed regional routing and cookie-based authentication handoff. Added MFA setup and verification screens and Stripe payment-result flows.
- Implemented keyboard navigation, focus management, and high-contrast mode; tested application workflows with a screen reader. Migrated from Create React App to Vite, configured build chunks, and manually tested workflows around production releases.

Additional projects at Orbio

- Document storage application: Developed a full-stack application using PostgreSQL, Express, React, Node.js, and Amazon S3.
- Product analysis application: Rebuilt an existing product-comparison frontend from scratch using reusable React components.
- Advocacy module, in development: Built static event-management screens and adapted designs to the existing app. Directed Claude-assisted API integration using Swagger documentation and personally tested workflow scenarios.

Capgemini Pvt Ltd | Sr Analyst / Software Engineer

June 2021 - June 2023 | Bengaluru, India
